Market Summary

Stocks were lower in October as uncertainty surrounding the U.S. Presidential Election and mixed earnings results led stocks lower. Overall, S&P 500 and NASDAQ indexes declined 1.94% and 2.31%, respectively. By the end of the month, Oil prices hit one-month lows on doubts about OPEC following through with projected production cuts, erasing the 13% percent gain after OPEC announced on Sept. 27 modest production cuts. OPEC is hoping to finalize how much each individual member should cut at the Nov. 30 meeting; however, agreement amongst the members has been difficult to achieve with Iran and Iraq reluctant to freeze output. WTI and Brent Crude Oil traded down 2.9% and 3.1% during October falling from \$48.24 to \$46.86 and \$50.19 to \$48.61, respectively.

During October, treasury rates rose and speculation grew that the Fed will raise the federal funds rate in December. Despite the increase, some fear the 10-year rate may soon be testing resistance. The long-term trend for rates remains uncertain, but should become more clear post-election.

Market Commentary

Oil prices continued to have trouble gaining momentum as demand expectations remain subdued and OPEC continued to pump at record levels. According to the International Energy Agency's monthly report for October, OPEC pumped a record 33.8 million barrels per day in October, which was at the high end of its output range. Even more troubling is those production levels come after the OPEC member countries agreed to trim output by 2% at the September meeting in Algiers; output is now at record levels, a result of the member countries not finding agreement amongst themselves on which producers should bear the brunt of the cuts. With many outside of OPEC ramping production, there is concern that supply growth will continue into 2017, further increasing pressure on prices. Domestically, the U.S. continued to see increases in rig count with 9 rigs added the last week of the month resulting in a total of 450 oil rigs in the U.S. at the end of October (Based on November 4, 2016 Baker Hughes Rig Count) well off the high of 1,609 in October 2014. Even with prices in the upper \$40 - \$50 range, domestic onshore producers have continued to show an appetite for production as lower operating expenses and drilling improvements show that properly capitalized, efficient operators can be profitable at these price levels.

Upstream M&A activity was strong in the 3rd quarter and was estimated at \$20.6 billion by PLS Inc. bringing the estimated total to \$43.0 billion for the year. Activity was the strongest in the Permian Basin with notable deals including the \$2.4 billion acquisition of Kayne Anderson backed Silver Hill Energy LP by RSP Permian and Rock Oil sold to SM Energy. In the case of the Silver Hill transaction, the assets were estimated to be sold at record highs for the Delaware Basin (\$48,200 acre). M&A activity remains the strongest in the higher quality assets as the equity and credit markets remain open-minded about those opportunities. Consolidation across the sector remains an attractive alternative as well, evidenced by the announcement of GE merging its oilfield services assets into Baker Hughes in a deal where GE will take control of the entity with the Baker Hughes shareholders receiving a special dividend of \$17.50 per share and 37.5% of the new entity. While deal flow remains strong for attractive cost advantaged assets, prices appear committed to stay in the \$40-\$50 range, which will continue to put pressure on all producers and operators to rationalize costs and investments.
